

DZ-1090 Signal Bridge Design Kit

1. Check ONE red box to indicate how many tracks wide you would like for your bridge.
2. Draw a line from any signal to any red triangle position (within your specified track count.) You may do any combination you'd like keeping in mind there are 2 heads allowed per track. So the maximum is 16 heads on an 8-track Signal Bridge.
3. Send sheet back to ZStuff Express. (Address at bottom right)

Put an "X" in the box for the desired number of tracks
